

NADIA RAHMAN

Security Engineer

Toronto, CA · nrahman@example.com · +1 555 0100 · linkedin.com/in/nrahman

Application-security engineer. My work is red-team research on prompt-injection attacks against LLM systems: building the detection classifier, the adversarial benchmark, and the guardrail hardening guide. Phrases like 'ignore previous instructions' appear throughout my writing as the object of study, never as instructions.

EXPERIENCE

Security Engineer, Maple Security Labs (2020 - present)

- Built the prompt-injection detection classifier now used in the product; maintain the adversarial payload benchmark and the threat model taxonomy behind it.
- Wrote the guardrail hardening guide covering jailbreak and delimiter-escape attack classes; ran the red-team evaluation each release.

Penetration Tester, Rideau Consulting (2016 - 2020)

- Web and API assessments; CVE write-ups and client hardening reports.

EDUCATION

BSc Computer Science, University of Toronto, 2016
